

COMMERCIAL ENTRANCES

QUALITY, SPEED, SAFETY

Columbia Elevator is the industry's premier source for elevator entrances, no matter what the application, budget level, turnaround need or site-difficulty. Not only are entrances by Columbia Elevator distinctively attractive, they are outstandingly well constructed and offer many advantages and exclusives not available anywhere else in the industry, including the industry's widest range of available opening and transom sizes. All entrances are manufactured on numerically controlled punch press equipment, shearing equipment and press breaks, connected by a computer network to the engineering department for the ultimate in quality control, accuracy, speed (shorter lead times) and dollar savings.

SLIDING DOOR ENTRANCES

All Columbia Sliding Door Entrances are subject to rigorous UL in-plant inspections and are labeled to certify compliance with the ANSI A17.1, section 2.11 of the elevator and escalator safety code. In situations where extremely large openings are required, Columbia's label allows for 14'-wide x 10'- high openings in masonry walls, and 8'x8' openings in drywall applications. If even larger openings are required, Columbia can custom-fabricate to any oversized specification and has the authority from UL to provide a UL Oversized Certificate, certifying that the frames are fabricated to UL's stringent manufacturing procedure. This certificate is also available for unlimited transom sizes.

To immediately determine if your job qualifies for an Oversized Certificate, enter the specifications into the interactive feature at: www.Columbia-Elevator.com/Oversized

Other BENEFITS of Columbia entrances include:

- The industry's only third-party-tested entrance assembly, certified to meet NFPA 105 for smoke seals, plus Coast Guard-approved for the manufacture of shipboard elevator entrances
- The industry's only entrances designed for "single-person" fascia installation
- A wide selection of interlocking sills – in aluminum, bronze and nickel-bronze – to implement 3-speed and 4-speed applications, and extensions to accommodate any jamb depth

QUIK-ENT™

QuikEnt™ is Columbia Elevator's exclusive, all-new QUICK ENTRance "tower" system designed and engineered for easier, faster and totally flexible installation of elevator entrances.

The BENEFITS are many:

- QuikEnt is suited for all hydraulic and traction jobs
- QuikEnt's reversible design ensures that you will never accidentally order wrong-handed doors
- QuikEnt's UL-approved, combination wall anchoring system ensures that you will never order frames for the wrong wall conditions (drywall or masonry)
- QuikEnt assembles and hoists into place as one unit, making it speedy to plumb, level and align with the running platform
- QuikEnt's integrated sill support angle eliminates waiting for GC's and ironworkers to complete their work
- QuikEnt requires little if any grout for installation
- QuikEnt is strong enough to support its own weight, finally providing a solution when floor slabs are too weak to accept a traditional sill support

NOTE: Also see the Cabs section regarding InstaFast™ – Columbia's patented bolt-free technology for INSTANTly FASTening panels to build elevator Cabs with similar savings in time and money, and increased safety for the field mechanic.
